

Product Information

PlantOS™

Seamless management of electronic submissions for plant protection products

All regulatory submissions start their life as a series of discreet documents and metadata. These are formed into a structured submission before being validated, published, and transmitted to the authorities. This is a long and complex process involving many different individuals, working with many forms of content, using a variety of systems, over an extended period of time. Needless to say, working together on these can be incredibly complex and time consuming.

Benefits

- Compliance with latest crop industry regulations
- Ability to validate and publish submissions from a single application
- Improves submission quality and consistency
- Supports for regional submission structures and formats from around the world
- Supports parallel work from multiple users
- Supports global management of dossiers
- Ensures a secure environment to submit virtually
- Minimal hardware requirements, rapid deployment and system validation, high performance and minimum training

To ensure compliance within the highly regulated crop sciences industry you need a solution that enables your organization to create and maintain compliant submissions across a number of products, within multiple geographic markets. EXTEDO's PlantOS is an off-the-shelf solution designed to meet these needs and ensure effortless compliance with the latest regulatory requirements.

A comprehensive electronic submission management solution

PlantOS provides you with a complete regulatory dossier assembly and submission management solution. Using PlantOS, you can build, view, validate and publish compliant submissions based on CADDY, ePRISM, eindex and other regional standards.

Its scalable, all-in-one submission management capabilities meet the requirements for both electronic and paper submissions, while its configurable design enables PlantOS to be adapted to suit the internal business processes of your organization. Existing business and regulatory processes can be mapped out and, where required, additional metadata can be included.

PlantOS is a collaborative tool enabling your users to work simultaneously on a single submission. Through this approach, the time required to compile submissions is reduced and higher quality submissions can be created in a shorter timeframe. By enabling full-text search within documents, variables and table of contents, PlantOS enables you to quickly locate and navigate to specific documents. While sophisticated audit trail and archiving capabilities allow quick access to the full change history of dossiers.

Intuitive User Interface

Functional Overview

PlantOS provides the following core functionality:

- › Highly secure environment for submission management
- › Support of regional submission formats, including CADDY (EU), ePRISM (USA), eIndex (CA)
- › Can be configured based on internal business and regulatory processes
- › Supports MS SQL and Oracle databases
- › Support for PDF, XML and paper-based submissions
- › Reference lists can be generated automatically with a single click
- › Full archiving capabilities
- › DMS integrations available

Standards-based submissions can be generated automatically within PlantOS – its internal validation capabilities ensure that submissions comply with the latest regulatory requirements and the process of generating reports is automated.

User-friendly, highly secure & integrated solution

The PlantOS interface is intuitive and user-friendly, ensuring ease of adoption amongst users. It is quick and easy to install and requires minimal administration. Deployment to end-users can be as either a desktop installation or through a terminal server instance.

PlantOS is also a well-integrated solution that can be configured to use various Document Management Systems (DMS), like EMC Documentum or Microsoft Sharepoint. Content can be easily dragged and dropped from any repository (DMS or desktop) directly into your electronic submission.

User management capabilities within PlantOS are also highly sophisticated. Administrators can add, delete and manage individual permissions for users, ensuring a highly secure environment for your submission management process.

PlantOS is the most cost effective solution for building, validating and publishing electronic submissions, ensuring effortless compliance with regulatory requirements within the crop science industry.

Available Modules

PlantOS DMS Connector

Enables integration with leading document management systems

PlantOS Viewer

Easy to use client for non-regulatory employees
